Attorney Docket No. 1455-062312

AMENDMENTS TO THE SPECIFICATION

Please amend paragraph [52] on page 6 of the specification as follows:

-- The outer retention vessel 21 includes at least one coolant hole 21a formed in a side or bottom surface thereof. The coolant hole 21a in the bottom surface of the outer retention vessel 21 is shown in dashed lines depicted by an imaginary line in FIG. 5 to generally indicate that the bottom surface may include the coolant hole 21a rather than indicating a specific location for the coolant hole 21a in the bottom surface. The coolant hole 21a is connected to the mixer 50, whereby the cooling water/inert gas mixture is supplied through the coolant hole 21a to the molten core material retention tank 20.--
